Inland Waterway Transport
real-time ship locations
for transportmanagement

Goal

Facilitate transport management on inland waterways

Built by BAGAAR

Target group

- Industries
- Brokers
- Third parties

Target group: their needs

- An overview of the inland waterways network, together with the real time location of the vessels.
- To follow the on-board cargo
- To identify the available and suitable vessels for loading freight.

Benefits

- 1.To minimize empty journeys which will consequently limit de CO2 emission
- 2.To increase the rotation of the vessels, which will consequently improve the return on investment.

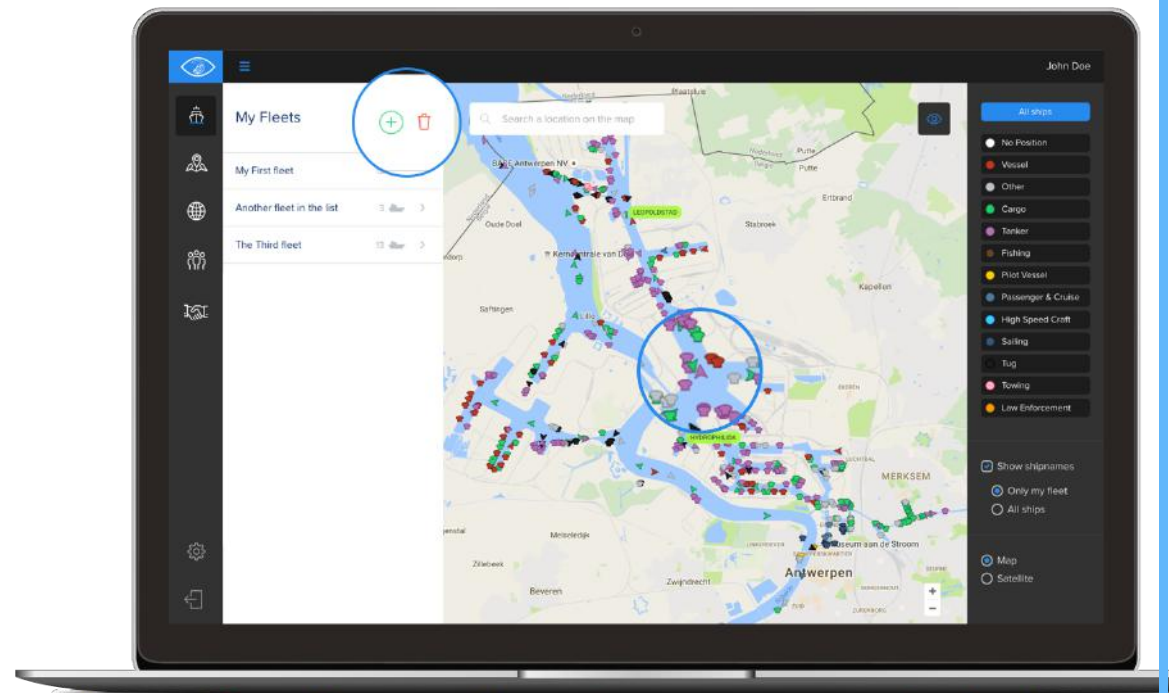

Benefits

“Better information is not only required to handle the increasing volumes and higher speed of transport, but also foster safe and energy-efficient inland shipping. A market with transparent information supports innovation, business relations and also better insight and results.”

Features & Possibilities

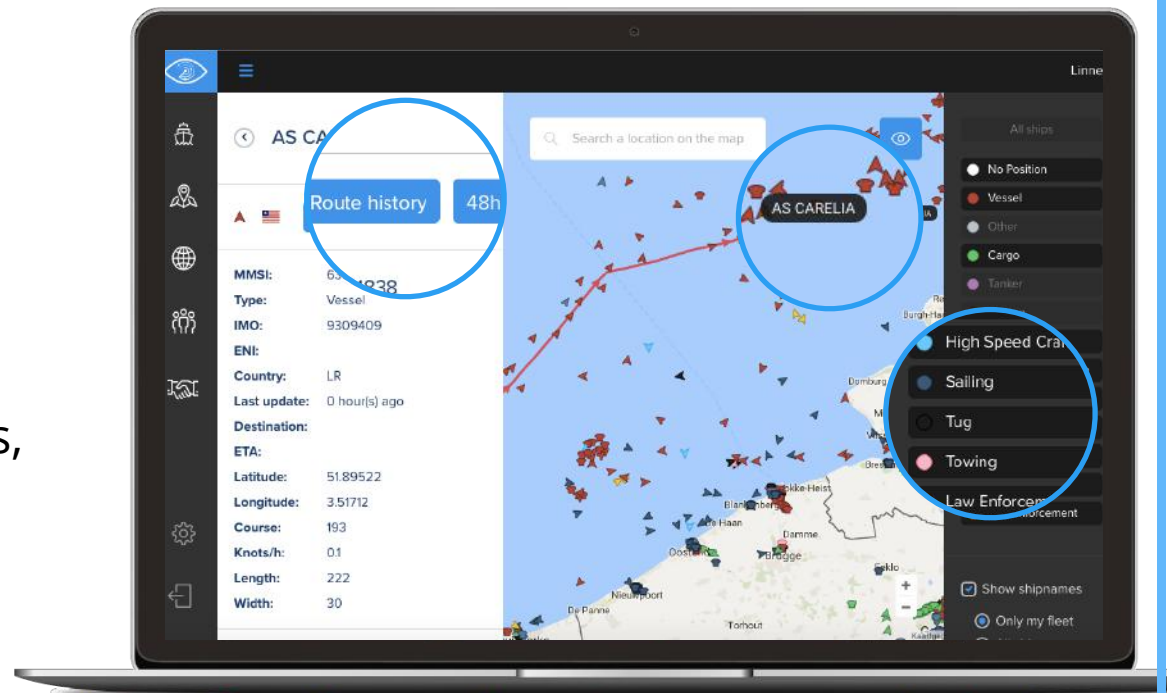

- Visuals to search for suitable cargo space and to anticipate on dockside activities

Built by BAGAAR

Features & Possibilities

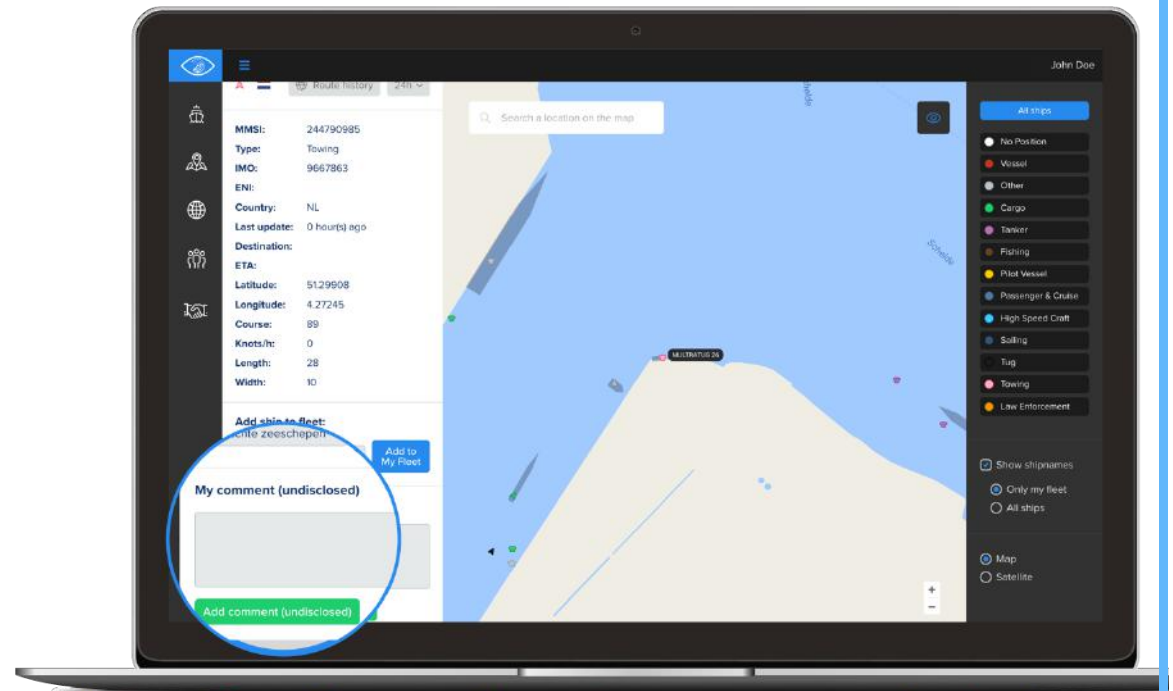

- Monitoring in real time
- A 24/48 or 72-hour tracking history
- Filters on ship type, ship status, ship dimensions...

Built by BAGAAR

Features & Possibilities

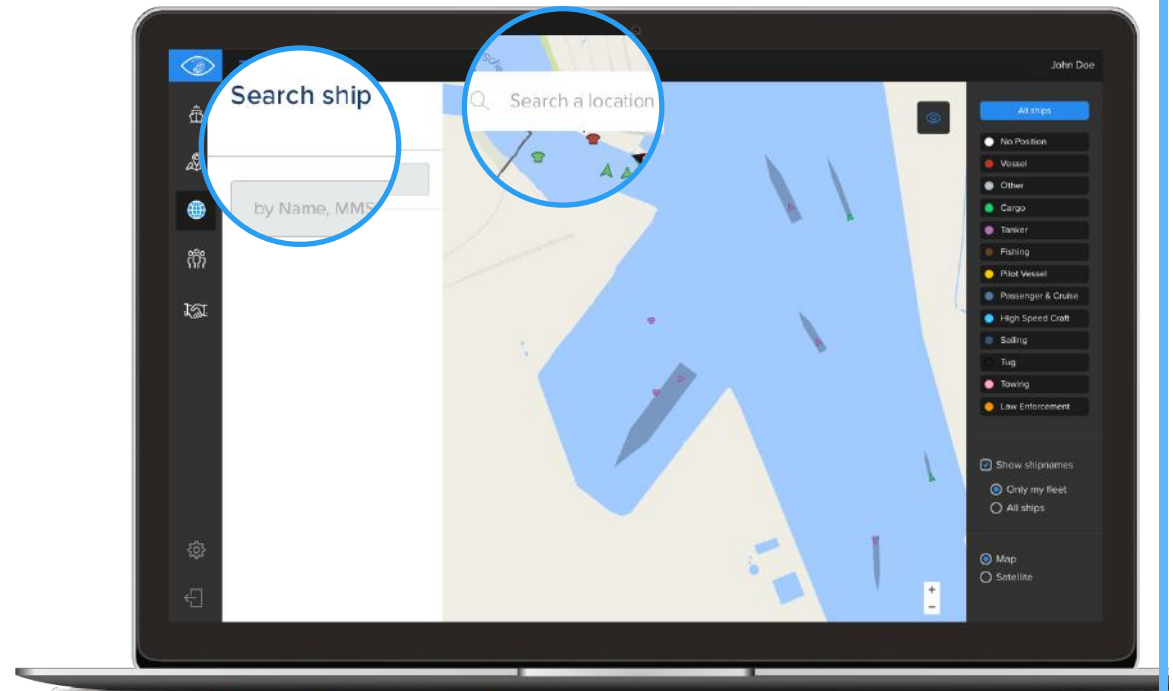

- Protected notes

Built by BAGAAR

Features & Possibilities

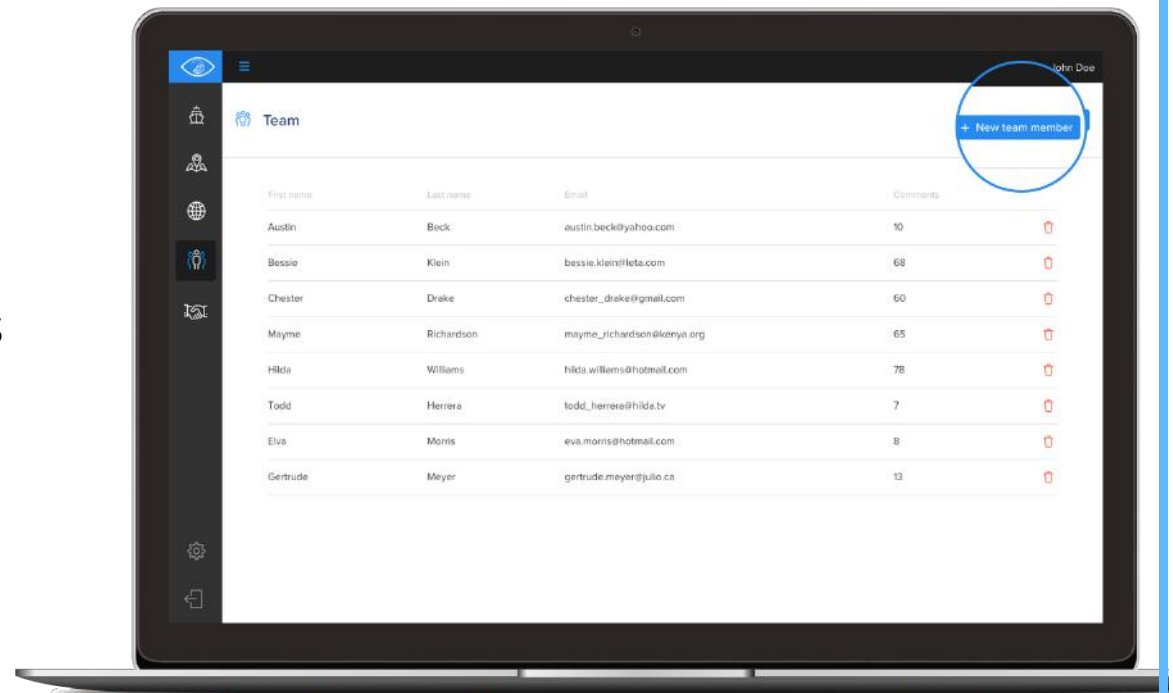

- Search by Name, IMO or ENI
- Search by location

Built by BAGAAR

Features & Possibilities

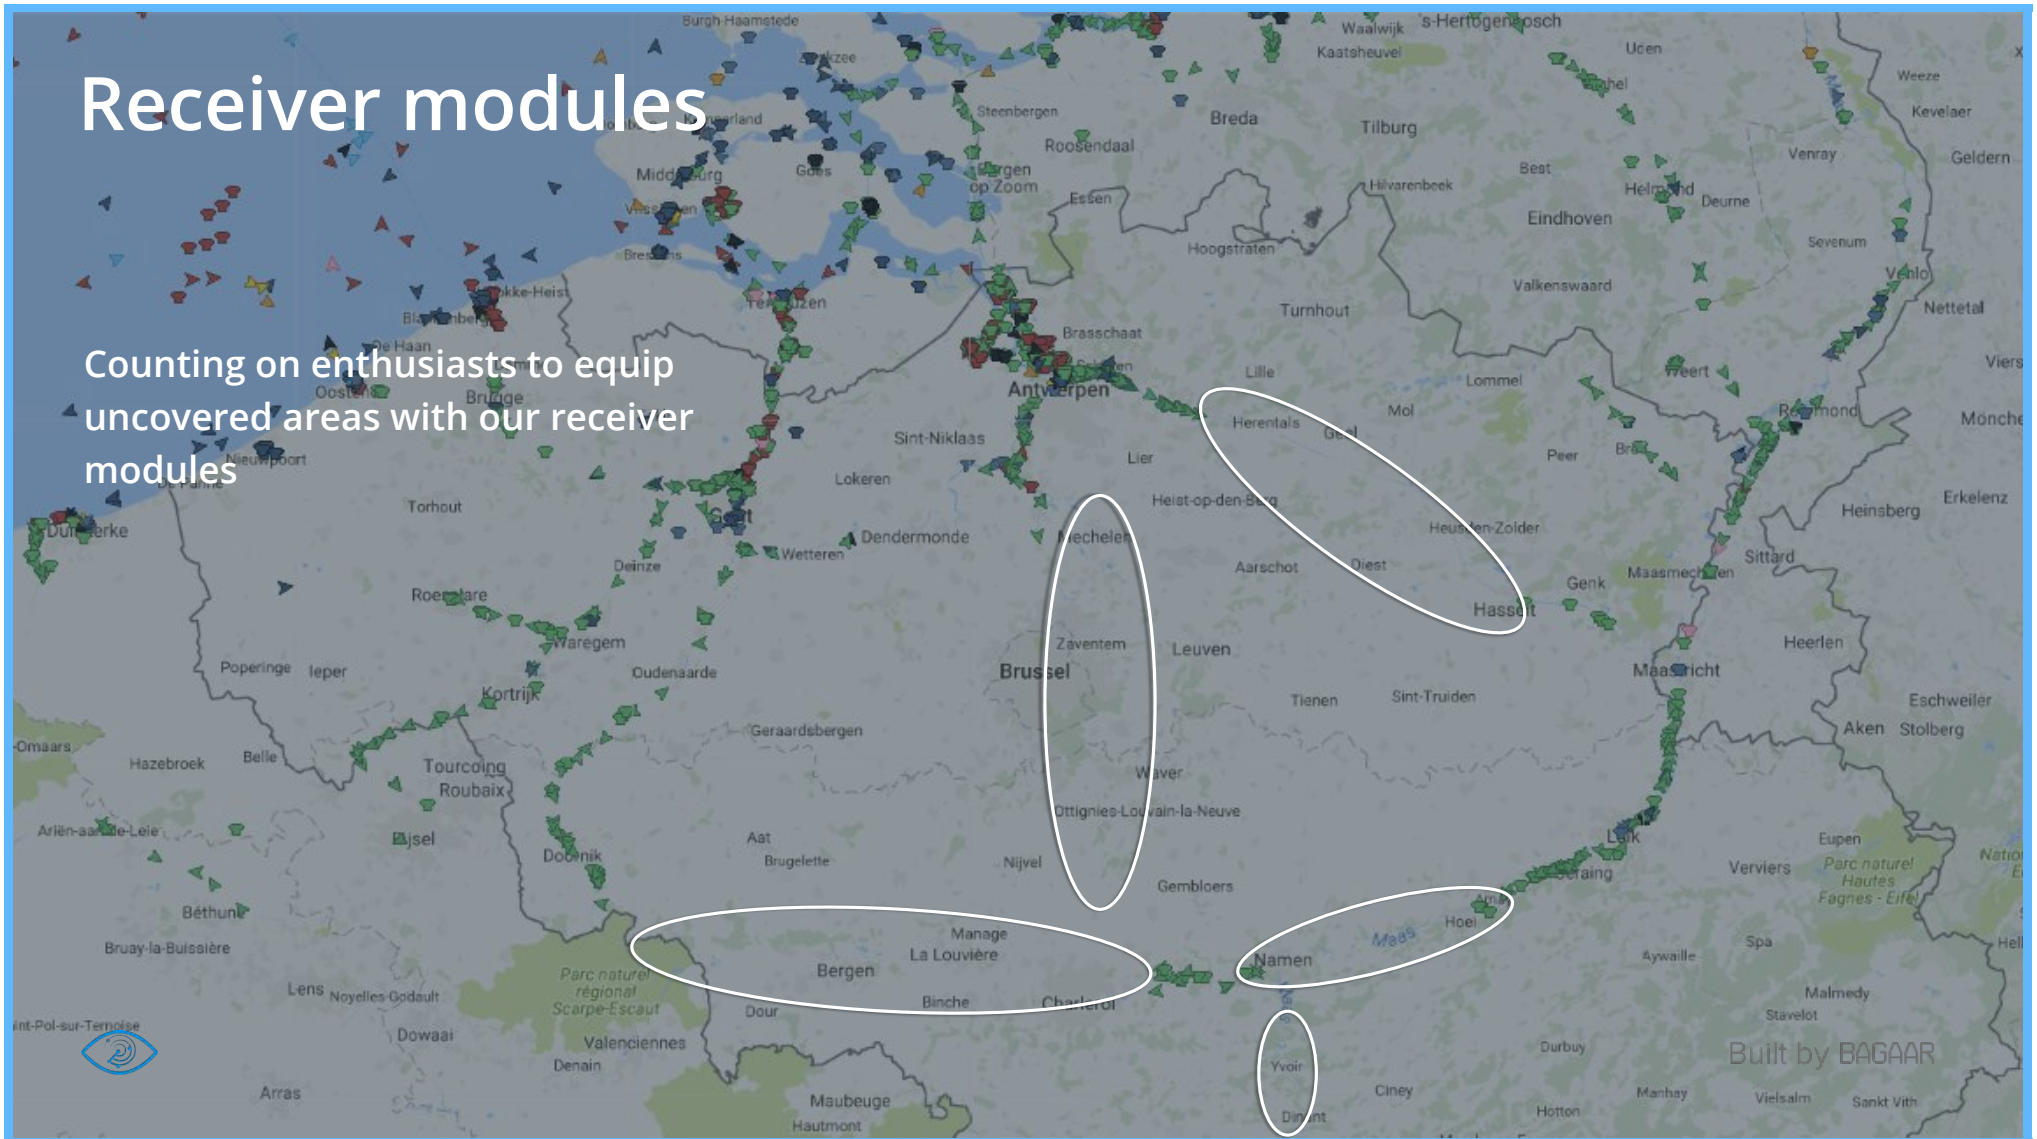

- Invite colleagues or customers with personalized settings

Built by BAGAAR

Receiver modules

Counting on enthusiasts to equip uncovered areas with our receiver modules

Future

- More area coverage
- Further developments on the digital tool
- **Obtain access to raw information (Waterway Managers)**
- Funding to the River Information Service Project on the Belgian territory

“Better real-time information will make the difference!”

Thank you for your attention!
